

SCI® Carbon Steel Press Fittings for Plumbing, Mechanical & Light Industrial Applications

About the Product

ASC Engineered Solutions™ offers a complete line of carbon steel press fittings for commercial and residential plumbing, mechanical, and light industrial applications. The SCI Press product line features a full range of elbows, tees, couplings, adapters, reducers and caps, providing reliable and economical pipe connections for carbon steel systems. This is one of the largest press product offerings in the industry, with over 430 individual SKUs. This wide selection enables you to use a single, dedicated solutions provider for all your press fitting needs.

These products are available in sizes ½ through 4 inches and meet or exceed industry standards for performance and regulations.

Installation is simple and can be done using standard press tools and jaws. The yellow or green marking on SCI Press carbon steel product exteriors mark the proper pipe insertion depth. The yellow exterior marking indicates the product has a HNBR ribbed sealing element that provides a consistent seal, even on uneven surfaces; the green exterior marking indicates that the product has an EPDM sealing element and can be used with EPDM compatible fluids. Full instructions for installation are provided on the product's packaging and on the submittal.
