

# Value Engineered Products Insulated Pipe Supports

Now available at ASC Engineered Solutions: Value Engineered Products (VEP) pre-insulated pipe supports

Eliminate unnecessary, costly steps with VEP complete insulated pipe support systems. Each unit has a high-density insulation insert, full vapor barrier with a 'self-sealing' lap and heavy gauge steel shield.

## Time Saving

Gain piece of mind by installing our units as part of the hanger system when the pipe is being hung; there is no lowering and adjusting of hangers required, no question if there will be enough room between pipes for your pipe insulation, and no uncertainty about quality, consistency, or fire ratings. The pipe is set to final grade prior to pressure testing and there is no reason for insulators to disturb the hanger or for the build team to return to recalibrate the pipe hangers following insulation work, eliminating the requirement to revisit the system after the insulators are done.

## Labor Saving

VEP products are easy to install – the labor is all right there in the box, rather than coming out of your profits. Get your builds completed faster and easier than ever before with VEP.

## High Quality Installation

Insulation and vapor barrier extend beyond the steel protection shield to assure a positive vapor seal to the adjoining insulation in all VEP models. The insulator 'butts up' to each end of the insert and seals it to the adjoining insulation with a simple tape joint. One model can be used in both hot and cold systems, eliminating confusion during ordering or installation in the field.

Simply slip the unit between the pipe and hanger, pull the release strip to seal the vapor barrier, and then slide the top metal shield in place. That's it!

## All Types of Applications

VEP has models designed to work with a variety of specific hanger styles. Units are available with 1/2" wall thickness through 6" pipe size and 1" wall thickness through 24" pipe size. VEP units are machined to fit copper or stainless steel tube, cast or ductile iron pipe, as well as standard steel pipe sizes. Our ODs comply with the ASTM C585 standard to guarantee we match your insulation needs.

These products:

- Meet MSS-SP-58 and ASHRAE Standards
- Have a continuous sealable vapor barrier
- Install easily with no welding required
- Accommodate pipe movement
- Impart efficiency to a piping system
- Custom designs for special requirements upon request

*Common sizes are stocked at ASC Engineered Solutions distribution centers and can be ordered in conjunction with our pipe hangers to minimize freight expense and meet minimum requirements. Special order units will ship directly from our Denver plant.*
