

Value Engineered Products Insulated Pipe Supports

**Now available and in stock at multiple ASC Distribution locations:
Value Engineered Products (VEP) insulated pipe supports.**

VEP pre-insulated pipe supports are designed for commercial and industrial use in a broad range of applications. They save contractors time and money by ensuring that they do not need to re-grade a piping system after the insulation is installed. Insulators typically must lower pipe hangers to wrap insulation around pipe. This requires the contractor to return to inspect the hangers and make any necessary elevation corrections.

Using VEP pre-insulated pipe supports means less labor and frustration for all! All customers who purchase ASC pipe hangers could benefit from also utilizing VEP pre-insulated pipe inserts.

- VEP pre-insulated pipe supports are compatible with ASC standard pipe hangers, including Anvil® Figure 260 Adjustable Clevis Hanger
- VEP products can combine with other ASC product orders to meet minimum freight requirements
- Product meets MSS-SP-58 and ASHRAE Standards as noted on submittal sheets
- We stock common IPS and CTS sizes for immediate shipment and fast delivery
- Special orders for custom pipe and insulation thickness sizes and materials are also available for rapid fulfillment
- All VEP products are cleanly packaged for safe and reliable shipping

For more information about Value Engineered Products pre-insulated inserts, visit us online or contact your local ASC Engineered Solutions sales representative.

Product currently in ASC stock includes:

Pro-Shield – 360° thermal hanger shields that meet a broad range of indoor pipe support applications; designed for pipe shields used in systems operating between +20° F and +1200° F.

Seismic Shield – Features seismic grip tabs that are centered for easy alignment and enable a friction fit to the strut or a positive connection to a clevis hanger.

VEP products are proudly manufactured in the USA.
